

This project is a **mock online shop for FORME**, a fictional home-and-lifestyle brand. It showcases a storefront for lighting, desk accessories, bags, and home essentials.

Visitors can browse collections and products, search and filter items, add products to a cart, and go through a sample checkout. The site also includes an About page, a Taiwan store locator, a Help center, and Join Us and Sign In pages.

Technically, it's a lightweight website: `server.js` serves the files, `app.js` renders the pages and handles interactions, and `styles.css` controls the design. Product data is built into the app, and cart contents are saved in the browser.

It's a **front-end prototype**, not a live store: it has no real accounts, payments, order processing, or support system. The Taiwan store locations are fictional, though their map uses Google Maps.
